GUARDIAN[®] ICE MELT PRODUCTS

100% Potassium Chloride

GUARDIAN[®] Potassium Chloride is a standard grade of de-icer, containing 100 percent potassium chloride (a fertilizer product used in the lawn and garden industry). GUARDIAN[®] Potassium Chloride is recommended for melting ice and snow down to 15° F. With proper use, safe for concrete and vegetation with no tracking.

| PRODUCT NUMBER | PACKAGE SIZE | QUANTITY PER PALLET | UPC CODE |
|----------------|--------------|---------------------|---------------|
| B49250 | 50 lb Jug | 49 Bags | Not UPC Coded |
| B4922M | 2000 lb Bag | 1 Bulk Bag | Not UPC Coded |

DIRECTIONS FOR USE

For best results, apply at the rate of 2 - 4oz. (1/4 - 1/2 cup) per square yard evenly over surface areas to be treated. If applying after a large accumulation, it is best to plow or shovel first, then apply product. This product may be applied prior to light snow or freezing rain to help prevent bonding of moisture to paved surfaces. Remove slush and water to prevent penetration of porous areas and cracks in the concrete, as continual thawing and freezing action can cause damage to poor quality concrete. Do not place product on or near vegetation as over-application can cause damage. Variable weather conditions such as temperature, depth of snow, wetness of snow, and ice content, may vary the recommended application amount.
